Date: 6/14/99 Phone: 305-6997 Art Unit: 1644 9E03
Search Topic: Please write a detailed statement of search topic. Describe specifically as possible the subject matter to be searched. Define any terms that may have a special meaning. Give examples or relevent citations, authors, keywords, etc., if known. For sequences, please attach a copy of the sequence. You may include a copy of the broadest and/or most relevent claim(s).
PLEASE PERFORM A RUSH INTERFERENCE AND

Mean 19.929; Variance 62.491; scale 0.319 Statistics: Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New polypeptide cpd. - useful as natriuretic, diuretic and/or vasodilator in mammals. Disclosure: Column 49: 45pp; English. The sequences given in R40387-748 are atrial natriuretic/ vasodilator peptide (ANVP) cDNAs. These ANVP fragments may be used for regulation of fillid volume and blood pressure in host organisms. These ANVP fragments may be produced by solid-phase techniques. See also R36937-78.
for regulation of fluid volume and blood pressure in host organisms. These ANVP fragments may be produced by solid-phase techniques. See also R36937-78.

Human Atrial Natriuretic Polypeptide analogue - having strong diuretic,
  Human Atrial Natriuretic Polypeptide analogue.
Human atrial natriuretic polypeptide; hypotensive; diuretic; beta-LANP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Disclosure: Column 49: 45pp; English.
The sequences given in R40387-748 are atrial natriuretic/
vasodilator peptide (ANVP) cDNAs. These ANVP fragments may be used for regulation of fluid volume and blood pressure in host organisms.
These ANVP fragments may be produced by solid-phase techniques. See also R36937-78.
                                                                                                                                                                                                                                                                natriuretic and hypotensive action.

Claim 1; page 2; 20pp; English.

This sequence differs from that of natural human atrial natriuretic polypeptide (hAMP) in that the N-terminal 6 residues are deleted. It is present in dimeric form and is useful as a diuretic, natriuretic or hypotensive. It has an application in the treatment or prevention of e.g. cardiac cedema or malignant hypotrension.

It is an intermediate for the synthesis of beta-LAMP or analogues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

The invention provides a composition for treating cardiac diseases associated with cardiac hypertrophy. The composition comprises an active ingredient capable of binding to the peptide receptor of GG-A and promoting production of cGMP. The drug composition may be used and promoting production of cGMP. The drug composition may be used cinically to treat cardiac diseases caused by cardiac hypertrophy, including chronic heart failure, ischeamt cardiac diseases and arrhythmia. The active substance can bind to the natriuretic peptide receptor of GG-A and promote production of GGMP, effectively preventing cardiac hypertrophy and leading to improvement of the pulmonary blood circulation. The substance does not affect haemodynamic properties,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     28-OCT-1998 (first entry)
Alpha human atrial natriluretic peptide (alpha-hANP) 2 (residues 7-28).
ANP: atrial natriluretic peptide; cardiac disease; cardiac hypertrophy; chronic heart failure; ischaemic cardiac disease; arrhythmia; cGMP; pulmonary blood circulation; haemodynamic property.
                                                                                                                                                                                                                                       Disclosure; Column 49; 45pp; English.
The sequences given in R40387-748 are atrial natriuretic/vasodilator peptide (ANVP) cDNAs. These ANVP fragments may be used for regulation of fluid volume and blood pressure in host organisms. These ANVP fragments may be produced by solid-phase techniques. See also R36937-78.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

vasodilator peptide (ANVP) cDNAs. These ANVP fragments may be used
for regulation of fluid volume and blood pressure in host organisms.
These ANVP fragments may be produced by solid-phase techniques. See

Aldosterone inhibiting polypeptide - for controlling aldosterone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    P71467 standard; peptide; 25 AA.
P71467;
25-APR-1991 (first entry)
Sequence of aldosterone inhibiting polypeptide,
[desArg32]-hANF(8-33).
Aldosterone dependent hypertension; atrial peptide; natruretic;
diuretic; smooth muscle relaxant.

The sequences given in R40387-748 are atrial natriuretic/
vasodilator peptide (ANVP) cDNAs. These ANVP fragments may be used for regulation of fluid volume and blood pressure in host organisms. These ANVP fragments may be produced by solid-phase techniques. See also R36937-78.

The sequences given in R40387-748 are atrial natriuretic/
vasodilator peptide (ANVP) cDNAs. These ANVP fragments may be used
for regulation of fluid volume and blood pressure in host organisms.
These ANVP fragments may be produced by solid-phase techniques. See

                            Aldosterone secretion is inhibited by the administration of a peptide of the invention and its addition salt. It is used for treatment of aldosterone dependent hypertension. Atrial peptides have matruretic, diuretic and smooth muscle relaxant activities. Sequence 25 AA;
                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New polypeptide cpd. - useful as natriuretic, diuretic and/or vasodilator in mammals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

The sequences given in R40387-748 are atrial natriuretic/vasodilator peptide (ANVP) cDRNs. These ANVP fragments may be used for regulation of fluid volume and blood pressure in host organisms. These ANVP fragments may be produced by solid-phase techniques. See also R36937-78.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

POLYPEPTIGE of dog and rabbit precursors of arrial natriuretic polypeptides deduced from nucleotide sequence of cloned cDNA.";

BIOCHEM, BIOPHYS. RES. COMMUN. 132:892-899(1985).

-!- FUNCTION: ATRIAL NATRIURETIC FACTOR (ANF) IS A POTENT VASOACTIVE SUBSTANCE SYNTHESIZED IN MAMMALLAN AND IS THOUGHT TO PLAY A KEY ROLLE IN CARDIOVASCULAR HOMEOSTASIS. HAS A CGMP-STIMULATING ATRIAL NATRIURETIC PEPTIDE, ALPHA (ANP) Gaps A DISULFIDE BOND IS REQUIRED FOR FULL ACTIVITY OF ATRIOPEPTINS SIMILARITY: BELONGS TO THE NATRIURETIC PEPTIDES FAMILY.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           01-AUG-1992 (REL. 23, LAST SEQUENCE UPDATE)
01-OCT-1996 (REL. 34, LAST ANNOTATION UPDATE)
ATRIAL NATRIURETIC FACTOR PRECURSOR (ANF) (ATRIAL NATRIURETIC.PEPTIDE)
THE HOMAN GENOME CONTAINS 2 DIFFERENT PREPRONATRIODILATIN GENES ONE CODES, FOR 2 ARG RESIDUES AT THE C-TERMINUS THAT ARE CLEAVED TO FORM THE MATURE PEPTIDE, WHILE THE OTHER ENDS IN A TERMINATION CODON IMMEDIATELY AFTER THE LAST CODON OF THE MATURE PEPTIDE. SIMILARITY: BELONGS TO THE NATRIURETIC PEPTIDES FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CARDIODILATIN-RELATED PEPTIDE (CDP).

                                                                                                                                                                                                                OIKAWA S., IMAI M., INUZUKA C., TAWARAGI Y., NAKAZATO H., MATSUO H.; "Structure of dog and rabbit precursors of atrial natriuretic polypeptides deduced from nucleotide sequence of cloned cDNA."; BIOCHEM. BIOPHYS. RES. COMMUN. 132.892-899(1985).

-: FUNCTION: ATRIAL NATRIURFIC FACTOR (ANF) IS A POTENT VASOACTIVE SUBSTANCE SYNTHESIZED IN MAMMALIAN ATRIA AND IS THOUGHT TO PLAY A
ATRIAL NATRIURETIC FACTOR PRECURSOR (ANF) (ATRIAL NATRIURETIC PEPTIDE)
(ANP) (PREPRONATRIODILATIN).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ATRIAL NATRIURETIC PEPTIDE, ALPHA (ANP)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TISSUE-HEART ATRIUM;

has vein relaxation activity.
Claim 1; page 1; 13pp; Japanese
This sequence was isolated from a cDNA library prepared from
poly(A) mRNA isolated from human heart. Sequences complementary
to the DNA encoding MDRIG of cardionatrin were isolated using
a mixture of oligonucleotide probes. Two plasmids, phAVD and phMANF,
identified by this screening process, were then used to transform
E.coli which were cultured to produce the peptide.

New DNA sequences from human atrium cordis - coding for new diuretic polypeptide or precursor cpds.

Claim 26; Page 37: 53pp; English.

The precursor of human gamma-ANP and its 26Asn-151Tyr fragmentare claimed (P50036, P50037), as are the DNA SQs encoding them (N50020, N50055). The 26Asn-151Tyr fragment has a diuretic action so is useful as a hypotensive/antihypertensive agent. The usual dose is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

pertide fragment of hypertension and related disorders - with synthetic pertide fragment of atrial natriuretic factor pro:hormone biscours; Column 4: 19pp; English.

Disclosurs; Column 4: 19pp; English.

Disclosurs; Column 4: 19pp; English.

This sequence represents the human atrial natriuretic factor prohormone conservation. Fragments of this sequence (see W34521-W34523) can be used in the method of the invention. The method is for treating hypertension, congestive heart failure, pulmonary odema, toxaemia of pregenacy, nephrotic syndrome, acute and chronic renal failure or hepatic cirrhosis with or without ascites; comprises administering a synthetic peptide with or without ascites; comprises administering a synthetic peptide consisting of manno acids 1:30, 31-67 or 79-98 of proANF. The peptides proANF(1:30) and proANF(79-89) can also be used in a method for treating hyperkalaemia associated with acidosis, digitalis overdose, succinylcholine, insulin deficiency, acute or chronic renal failure, duretic, natriuretic and/or kaliuretic activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  of pregnancy;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   24-MAR-1998 (first entry)
Human atrial natriuretic factor prohormone, therapy; hypertension;
Human atrial natriuretic factor prohormone; therapy; hypertension;
congestive heart failure; pulmonary oedema; toxaemia of pregnancy;
nephrotic syndrome; renal failure; hepatic cirrhosis; hyperkalaemia acidosis; digitalis overdose; insulin deficiency; Addison's diseass
                                                                                                                                                                      Monoclonal antibodies recognising gamma-atrial natriuretic -
used for diagnosis of diseases eg kidney and heart disease.
Used for diagnosis of parties of diseases.

Physio-active peptide derived from birds - has cysteine bridge,

Physio-active peptide derived from birds - has cysteine bridge,

specified AA sequence and diuretic and antihypertensive properties.

Disclosure: Fig 14: 16pp; Japanese.

This sequence has 99 amino acid residues homologous to the pre-chANP.

Sequence 147 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The inventors claim is polygeptide comprising atrial natriuretic/vasodilator polypeptide (ANVP), pro-ANVP or pre-pro-ANVP, or their fragments. The encoding DNA sequence is also claimed. The claimed polypeptides are natriuretics, duretics, vasodilators and modulators of the renin-angiotensin-aldosterone system. Dose is

New atrial polypeptide cpds. - useful as natriuretics,
diuretics, vesodilators and modulators of the
renin angiotensin allosterone system
03-A02-1992 (first entry)
Sequence of pre-pro-atrial natriuretic/vasodilator
polypeptide (ANVP).
Natruiretic; dulretic; vasodilator;
venin-angiotensin-aldosterone-system.
                                                                                                                                                                                                                                                                                                                                                                                                       Sequence of pre-human atrial natriuretic peptide.
Human-chANP; diuretic; antihypertensivity; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /note= "encoded by N50763'

This sequence is encoded by the human pre-pro atrial natriuretic/
vasodlator peptide (ANVP) cDNA. Fragments of this protein and the
corresponding sequence in rat (see also R36936), may be used for
regulation of fluid volume and blood pressure in host organisms.
The ANVP fragments may be produced by solid-phase techniques. See
also R36937-78.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  vasodilator polypeptide (ANVP), pro-ANVP or pre-pro-ANVP, or their fragments. The encoding DNA sequence is also claimed. The claimed polypeptides are natriuretics, diuretics, vasodilators and modulators of the renin-angiotensin-aldosterone system. Dose is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; pre-pro; atrial natriuretic/vasodilator peptide; ANVP; rat; regulation; fluid volume; blood pressure.

Matsuo H, Kangawa K, Hayashi Y, Oikawa S, Oshima T, Tanaka S, Wakazato H, Tawaragi Y; Tanaka S, Wakazato H, Tawaragi Y; Tanaka S, Wakazato H, Tawaragi Y; MwP1: 85-312162/50.

New DNA sequences from human atrium cordis - coding for new louretic polypetide or precursor cpds.

Claim 25; Fig 5; 53pp; English.

The precursor of human gamma-ANP and its 26Asn-151Tyr fragmentare claimed (P50036, P50037), as are the DNA SQs encoding them (N50020, M50055).

W50055). The 26Asn-151Tyr fragment has a diuretic action so is useful as a hypotensive/antihypertensive agent. The usual dose is
   Genetic analysis diagnostic for hypertension - by detecting polymorphous of the renin, kallikrein or ANF gene regions Disclosure; Fig 2: 51pp; English.

The patent application is for a method used for determn. of a genetic fingerprint of a subject which allows early diagnosis of individuals at risk of hypertension and permits early therapeutic measures to prevent the final symptomology of the disease. The section of the genome which is fingerprinted or otherwise subject study using the results is dependent on the nature of the probesine probes useful in the present invention are selected from the renin, kallikrein, or ANF gene (see FT).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Cardiodilatin, peptide.
Cardiodilatin; plasmid pHANF48; muscle relaxant; antihypertensive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   p50036;
03-SEP-1991 (first entry)
Sequence of the precursor of human gamma-atrium natriuretic
polypeptide (ANP).
Natriuretic; diuretc: hypotensive; antihypertensive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Score 101; DB 3; Length 151;

Claim 7: Page 115: 144pp: English.

The inventors claim a polypeptide comprising atrial natriuretic/ vasodilator polypeptide (ANVP), pro-ANVP or pre-pro-ANVP, or their fragments. The encoding DNA sequence is also claimed. The claimed modulators and modulators of the renin-anglotensin-aldosterone system. Dose is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

Disclosure: Fig. 13; 45pp; English.
The DNA encoding the cardiodilatin is carried on plasmid pHANF48.
Cardiodilatin is a muscle relaxant, so is useful as an antihypertensive agent. The DNA is obtd. from RNA isolated from the human heart.
